<b>Andromeda.</b> See <i>Pieris japonica</i> .	
<b>Aucuba jap. nana.</b> *R. C. 10 for \$1.50.	

## Azaleas

It is best to give Azalea rooted cuttings protection from wind and sun the first winter to prevent the bark from cracking. This can be done by building frames 1 foot high around the beds and shade with lath or other material. Also it is well to hold up on fertilizers after July and not to water much after Sept. 1. This acts to harden off the wood, making them much harder against severe cold weather.
